

ONE CAPITAL

Services & Products

One Capital Investment Private Limited is a research-led financial services company offering investment solutions across Mutual Funds, PMS, AIF, Equity, Equity Baskets, Options Baskets, Broking and Investment Advisory.

Our biggest strength is our research. We do not rely only on past returns. Our research studies the economy, markets, sectors, businesses, valuations and market trends to identify where opportunities may emerge in the future.

Our approach: Research first. Strategy next. Investment last.

1. Mutual Funds

We help investors select mutual funds based on their goals, risk profile, investment horizon and our research view of the market.

Key features

- Research-based fund selection
- SIP and lump-sum investments
- Diversification across asset classes and categories
- Portfolio review and monitoring
- Goal-based investing
- Regular review based on changing market conditions

Who is it for? First-time investors as well as experienced investors looking to build long-term wealth.

What makes One Capital different? We do not select funds only because they have delivered strong past returns. We study the fund, its portfolio, underlying sectors and companies, valuations and the market environment to understand its future potential.

2. Portfolio Management Services (PMS)

PMS provides investors with a professionally managed and more personalised investment portfolio.

Key features

- Customized portfolios
- Research-driven stock selection
- Active portfolio management
- Portfolio monitoring
- Risk management
- Regular performance and portfolio reviews

Who is it for? Primarily investors with larger investible capital who want a customised portfolio and active management.

What makes One Capital different? Our portfolios are built around our research and market outlook rather than simply following popular stocks or recent performers.

3. Alternative Investment Funds (AIF)

AIF solutions provide access to professionally managed investment strategies beyond traditional mutual funds.

Key features

- Access to alternative investment strategies
- Research-driven investment selection
- Professional portfolio management
- Diversification beyond traditional investment products
- Opportunities based on specific investment themes and strategies

Who is it for? Primarily sophisticated and eligible investors with higher investible capital and a longer investment horizon.

What makes One Capital different? We focus on understanding the investment opportunity, underlying assets, risks and potential future drivers before considering an investment.

4. Equity Investments

We provide investors with access to direct equity investing supported by our research and market insights.

Key features

- Research-backed stock ideas
- Fundamental analysis
- Sector analysis
- Valuation analysis
- Market and economic research
- Portfolio monitoring

Who is it for? Investors who want to invest directly in listed companies and are comfortable with equity-market risk.

What makes One Capital different? We do not simply chase stocks that are already popular or have recently gone up. We look for businesses and sectors where future growth, earnings and valuations may create investment opportunities.

5. Equity Baskets

Equity Baskets provide investors with a group of carefully selected stocks based on a particular investment strategy or theme.

Key features

- Multiple stocks in one strategy
- Research-based stock selection
- Defined investment theme or strategy

- Diversification across selected companies
- Periodic review and rebalancing where applicable

Who is it for? Investors who want exposure to direct equities but prefer a structured portfolio rather than selecting individual stocks themselves.

What makes One Capital different? Our baskets are built around a research view, not simply a collection of stocks that have performed well recently. We identify the underlying theme, select companies that can benefit from it and review whether the original investment thesis remains valid.

6. Options Baskets

Options Baskets are structured strategies using options based on specific market views and defined risk parameters.

Key features

- Research-driven market strategies
- Defined strategy and investment approach
- Focus on risk management
- Strategies based on specific market conditions
- Active monitoring

Who is it for? Experienced investors who understand derivatives and are comfortable with the higher risks associated with options.

What makes One Capital different? We focus on the strategy and risk first, rather than simply providing options trading calls. Our research considers market direction, volatility, important levels and broader market conditions before developing a strategy.

7. Equity Broking

We provide investors with access to equity markets for buying and selling securities.

Key features

- Equity market access
- Investment and trading support
- Research insights
- Market updates
- Portfolio support

Who is it for? Retail investors, active investors and long-term equity investors.

What makes One Capital different? Our broking offering is supported by our research capabilities, allowing investors to combine market access with informed investment insights.

8. Retail Broking

Retail Broking provides individual investors with access to financial markets along with investment support and research insights.

Who is it for? Individual investors, salaried professionals, first-time investors, active investors and long-term equity investors.

What makes One Capital different? We aim to provide more than just execution. Our research and market insights help investors understand the opportunity behind an investment decision.

9. Investment Advisory

Our advisory service helps investors create an investment strategy based on their financial goals, risk profile and investment horizon.

Key features

- Financial goal assessment
- Risk profiling
- Asset allocation
- Investment planning
- Product selection
- Portfolio review
- Market and investment insights

Who is it for? Individuals, families, professionals, business owners and investors looking for a structured investment strategy.

What makes One Capital different? We start with the investor's objective, not the product. The question is not simply "Which product should you buy?" but "What is the right investment strategy for you?"

Our Biggest Strength – Research

Research is at the heart of One Capital.

Many investment decisions are heavily influenced by historical performance. We believe history is important, but it is not enough. Our research looks at the economy, interest rates, liquidity, market cycles, sectors, businesses, earnings, valuations, market trends, emerging opportunities and risks.

Our Research Approach

Understand → Analyse → Identify → Build → Monitor

We first understand what is happening in the economy and markets. We then analyse sectors, companies, valuations and risks. From this research, we identify potential opportunities, build investment strategies around them and continuously monitor the investment thesis.

How One Capital Is Different

1. We Look Forward, Not Just Backward

Past performance tells us what happened. Our research focuses on understanding what could drive performance in the future.

2. Research Before Recommendation

We do not start with a product and try to find an investor for it. We start with research and the investor's requirement, and then identify the appropriate solution.

3. One Research Engine Across Multiple Products

Our research supports Mutual Funds, PMS, AIF, Equity, Equity Baskets and Options Baskets. This allows us to look at opportunities across different investment solutions rather than viewing every product in isolation.

4. Strategy Over Short-Term Noise

Markets move every day. Our focus is on understanding the larger trend, the underlying opportunity and the risks rather than reacting to every short-term market movement.

5. Risk Is Part of the Research

We don't look only at how much an investment can make. We also ask: What can go wrong? Understanding downside risk is an important part of our investment process.

Our Philosophy

Research. Strategy. Discipline.

Research helps us understand the opportunity. Strategy helps us decide how to participate. Discipline helps us stay focused through different market conditions.
